Total East German production, including imports, during period 1 January to 30 April 1953:

588,342 tons <sup>2</sup>/<sub>3</sub>

50X1-HUM

1. Comment: The production quota for transformer sheets should read 3,318 instead of 4,318 with a resulting total amount of available transformer sheets of 3,569 instead of 4,569.

50X1-HUM

2. Comment: While the total amount of steel products quoted in the annex was 588,342 tons during the period from January to April 1953, the amount for the corresponding period in 1952 was 639,419 tons. The imports amounted to 119,278 tons in 1953 as compared with 127,182 tons in 1952, thus involving a decrease of about 8,000 tons. The production decreased by about 19,000 tons for steel bars; about 7,000 tons for sections up to 18 cm; and by about 9,000 tons for mine rails, while it increased by 25,000 tons for heavy sheet; 4,000 tons for medium sheet; 3,000 tons for fine sheet; 1,000 tons for sections above 18 cm; 1,000 tons for forging billets; 1,000 tons for welded

thread pipe; 1,000 tons for seamless boiler pipe; 14,000 tons for rolled wire; 3,000 tons for bright steel; 2,000 tons for cold rolled bands; 4,000 tons for steel alloys; and 2,000 tons for electric special steel sheets. The present report contains no information on the production of foundry pipe, which amounted to 39,000 tons during the respective period in 1952.

50X1-HUM

3. Comment: The steel amounts quoted by DHZ Metallurgie do not always check with the quantities actually produced by the steel works and rolling mills of the Ministry for Metallurgy and Ore Mining during the respective period. The total production of rolled products, including semi-finished products for forges and presses, amounted to 279,253 tons during the first quarter of 1953, as compared with 239,065 tons during this period in 1952.
